

IDEA model fits to daily Canadian COVID-19 data

14-May-2020

Figure 1: Cumulative cases

Overview

Daily fits to reported case counts are presented for provinces/regions reporting substantial COVID-19 activity using the IDEA model. This report was run on 2020-05-14 08:06:24. Forecasts are based on reported case data up to 2020-05-13. Data are collected by the [COVID-19 Canada Open Data Working Group](#).

For each province, we show the model fit to incident and cumulative cases. We also include a daily estimate of the discount factor (d). The metric provides a measure of the degree of control that is occurring. A larger value is better - it suggests more control and therefore slowing epidemic growth. The value of d is estimated every day, using all of the case data up to the date of estimation. When estimates of d are stable (no large swings), this suggests that the model estimates are reliable. Large swings in estimates of d over time suggest unstable model estimates and less confidence in the forecasts - this may indicate that a new outbreak wave is coming or a change in case definition or testing criteria (as was seen in Quebec). A decline in d corresponds to worsening control.

The effective reproduction number (R_t) is calculated over time. Our goal is for this value to be less than 1. A value <1 indicates that each old case is making less than one new case on average and the epidemic is under control. Note that we're estimating R_t using the reported case data. Ideally, we'd want to use onset or

transmission dates but since we're using publicly-reported, aggregate data across jurisdictions with different reporting lags, we're not attempting to adjust the data. The method used is described [here](#).

Table 1: Estimated effective reproductive numbers and 95% confidence intervals

Region	R _t	95% confidence interval
Canada	0.80	0.66-0.91
Alberta	0.87	0.32-1.41
British Columbia	0.46	0-1.38
Manitoba	1.00	0-4.19
New Brunswick	0.20	0-3.98
Newfoundland and Labrador	0.00	0-3.1
Nova Scotia	0.17	0-2.15
Ontario	0.80	0.57-1.02
Quebec	0.82	0.65-0.96
Saskatchewan	0.00	0-1.2

Provinces/Territories with at least 50 reported COVID-19 cases
