Subject: RE: PPE shipments & success stories - QC

PSPC just sent more info. If you'd like — can say that more than 75% of GoC PPE flights included supplies procured by the Government of QC, which we had offered to help bring over for them. O

So that means 17 / 20 flights GoC flights included Gov of QC supplies.

Also... just to be clear — the 'empty' PPE plane is flight 21, so it doesn't count in any of this. Thanks!

Subject: PPE shipments & success stories - QC

Hello!

This is what I've pulled together. Not sure if it's too late.

On the total PPE shipments—the number is always changing & certain numbers (i.e. 68 ventilators) seem pretty low. But the surgical mask & gowns numbers look good at least. Would maybe use the success stories rather than specific delivery numbers.

Thanks!

Flight Assistance:

- We have brought home twenty planes full of supplies, with flights coming in nearly every day this past week. 17 of the 20 planes included supplies that the Government of QC procured, which we have helped bring over.

Total PPE shipments to QC as of May 2 from HC:

453,999 N95s
5,131,700 surgical masks
47,600 gowns
1,801,350 pairs of gloves
25,000 face shields
68 Ventilators

Notable companies in QC who we have contracts with to produce supplies for Canadians:

Logistik Gowns:

- We recently signed a new contract with Logistik Unicorp, a manufacturer in Saint-Jean-sur-Richelieu, Quebec. They provide Canadians with over 11 million medical gowns.
 - o They already delivered 5,400 gowns to PHAC last week.

CAE — Domestic Ventilator production based out of Mtl:

- Headquartered in Montreal, Quebec, CAE is a world leader in the production of educational tools that help healthcare professionals deliver safe, high-quality medical care to patients.
- CAE has been working on a prototype respirator for some time, but when the COVID-19 crisis hit, they turned their attention to bringing this product to market.
- To do so, they partnered with the government and used NRC's services.
- This is a brand new respirator that represents new, innovative, Canadian intellectual property.
- Because of their existing capabilities, CAE is not only offering a respirator, but also the opportunity to train the people who will use it to save lives.
- During this process, the company expects to create and/or retain approximately 150 jobs.
- They will be producing thousands of ventilators over the coming weeks.

FR - Calko Group (Montreal, QC)

- Calko was founded sixty-two (62) years ago in Montreal.
- This company normally produces medical bandages.
- However, because of COVID-19, it decided to help Canadians by offering washable cloth masks.
- Today, the Calko Group is ramping up its efforts to produce masks, medical gowns and alternative protective clothing in its factories.
- Initially, it had manufacturing capacity, but did not have access to textiles to produce this gear.
- Calko worked with the Government of Canada.
- As a result of this collaboration, the company obtained Canadian fabric to make medical gowns. The company is able to speed up its production.
