**Subject:** RE: PPE - Procurement - Second Barrier Protective Shield

I spoke with Brad about an hour ago. He needs to go through the licensing process before he can sell the shields so I passed along the email portal to him.

I've also flagged his B&S application to Madison and his incoming DL application to Kylie. I think we're all good to go here.

Adding Tim.

I think Tim has been in touch. I also directed Brad to fill out the buyandsell.gc.ca website, which he has done.

Madison, sorry I didn't loop you in earlier!

Hi Madison,

Please see below for important info on a company in SK that is developing and has the potential to expand development of PPE. Courtney Keith flagged this for us in hopes that someone is able to call Mr. Hertz and follow up on the opportunity.

If there is a better place to send procurement opportunities such as this, please let me know and I will follow up.

Let me know if you have any questions.

Thanks all,

Rebecca Parkinson

Subject: Second Barrier Protective Shield

Ross:

In the last 3 days I have retooled my Printing Company in Regina We are making these Protective barriers (see pics) that go over fabric masks and protective glasses as a second layer of protection now to help assist with the Covid-19 Pandemic. They are disposable and ship flat, assembly take 20 seconds. For anyone that might come in contact with someone with Covid-19. There are other designs out there but i cant find any raw material to make those designs so i made my own design. The other designs take 10X to make as well.

I have the ability to deliver 24,800 shields starting Tuesday. With my existing equipment i can make 4,380 per day running 24/7 and with additional equipment (\$500,000 ) that i could buy I could double my production rates.

Then i will order another truck load when i find more material. I can deliver a sample anywhere today. \$18.90 per unit and less based on order size. The larger the order the greater the discount. I can even work delivery included for the rights order volume.

Sleek Signs has a 23,000 foot production facility in Regina. We have 15 Printers that are the size of a car and are able to produce millions of decals, floor graphics etc etc. I will give a tour to anyone that wants to see that we are a real company. I even produced a 2 minute video that shows our facility and can forward that video if you want to see it.

I laid off my entire 32 staff two weeks ago. I have started to bring some people back to work. And with additional work i will bring more back. I also have another empty industrial building i could add printers / cutters to in Days not weeks. I am hooked up all across canada with other resources and could give them work as well. Im your one stop solution !!!

My cell is.  I would be willing to meet anyone, anytime , anywhere. Just want to help with Covid-19 and also get my people back to work.

Ps. I know next time ill use a professional model for the pictures and not my Production Manager Brad Hertz
