Subject: FW: Reagent shortage

Hello Matt,

Quebec will apparently not have enough reagents to continue testing in a few days.

Are you aware?

Olivier

Reagent shortage.

Reagent: Product for extracting RNA (viral load) from a sample in order to conduct testing. The only product compatible with our current equipment. We need at least some reagent to turn things around in a couple days. Yvan is getting back to me with the minimum amount we would need...

Company: Biomérieux
