Subject: Re: DRAFT: Announcement

We both hate this, but with a moment to breathe and come back to this, I edited the first and last tweets. Thoughts on these, or do you prefer the originals? (Adding the two in the middle for context but they're the same as below.)

Right across the country, businesses are stepping up and supporting our health care workers. In fact, we've spoken with almost 3,000 companies who want to help however they can so those on the front lines have the tools they need to keep you safe.

We've signed new agreements with three Canadian companies so they can make portable ventilators, surgical masks, and test kits. We've also signed letters of intent with five other companies to produce more test kits, hand sanitizer, and protective masks and gowns.

Through the Next Generation Manufacturing Supercluster, we're helping companies here at home develop vaccines, ventilators, and more. And we're investing \$2 billion to purchase protective personal equipment - including for bulk purchases with provinces and territories.

Canadian businesses aren't backing down from this challenge - instead, they're rolling up their sleeves and getting to work. And as the demand for health supplies goes up, we'll keep working together so Canada is able to keep up. Get more details: (LINK)

Since asking businesses to join the fight against COVID-19, we've spoken with almost 3,000 of them who've reached out and offered to help. And as the demand for health supplies goes up, we're working together so Canada is able to keep up. Get more details: (LINK)
