Subject: RE: Ventilators

Hi Iain,

Thank you for your offer. Adding my colleague Boyan, from the Department of Procurement and Marco from my team at ISED. Moving others to Bcc.

We would like to discuss areas of priority need in Canada and companies that could benefit from a parts arrangement with Tesla. Do you have time to connect by phone this afternoon?

Sarah Hussaini

Director of Policy / Directrice des politiques Office of the Minister of Innovation, Science and Industry / Cabinet du ministre de l'Innovation, des Sciences et de l'Industrie

Subject: Re: Ventilators

Hi Sarah,

At this time Tesla is donating all of the ventilators to the most impacted areas in North America. Primarily at this moment they are all being donated to hospitals in the New York area.

Tesla will obviously be reevaluating where the immediate and most urgent needs for ventilators are in North America and the company will ship out any supply available to help in those areas. The company is gearing up to manufacture ventilators in the US as well which will certainly increase available supply to serve more areas.

If ISED knows of companies making ventilators in Canada that require machined parts, please connect them with us. Once the Tesla Hibar team can review the needed part designs they are ready to gear up to machining any parts that we have the capability to make to help scale domestic production of ventilators here in Canada.

Iain.

Hi Iain,

We see that Elon Musk was able to acquire some ventilators from China for California.

As you know, we are working all pathways to get more supply here in Canada. If you have access or avenues to get ventilators that would be most appreciated. We will pay of course.

Many thanks,

S.
